- **Discrete Reflections**
- **Speaker/Listener Positioning**
- **Expert Overview (Summary)**

*requires client to record .wav files using omni-directional testing mic

**Includes two sets of test data (two locations in room or pre/post)

What Our Customers are Saying:

As a typical audio lover, I was a bit unnerved by the thought of having to get the proper measurements in my room. However, this program made a huge difference and was very easy to use. Oh, and it's always nice to have someone at the other end of the phone giving you direct feedback, direction and simple explanations. "Jeff really knows his stuff"

Ted Brady (moderator, HiRez Music forum on Audio Circle)

When we were looking to do some treatment to the White Arc Mastering studio we turned to HdAcoustics because we heard some great things about Jeff's work. We decided to try his remote room testing method. It was easy and the results were amazing. Jeff just sent us some tones to play through our system and what we got back from him led to some amazingly detailed drawings and instructions for fixing up our space.

Paul Mahern- engineer (Mellencamp, The Fray)

"Jeff's room evaluation process led to a stunning improvement in the audio experience of our media room. Working with Jeff was a consumer's dream: a real collaboration. In addition, the process ensured that we got the best possible expertise, not just what was available locally or within a short drive. I do not think that spending 3-5 times the money on hardware would have made this great an improvement."
